Fiberglass wire size	4mm,5mm,6mm,8mm,10mm,11mm,12mm,16mm
Thickness of wire	210 g/m
Tensile strength of wire	1200kg
Pulling tension fracture	4.5 Ton
Wire length max	300M
Minimum bending radius	300mm
Diameter of reel	1200mm
Certification	ISO9001,RoHs,CE
MOQ	1PCS
Lead Time	10 Days
Waranty:	12 monthes
Payment:	TT/LC/PAYPAL/DP/DA in advance

Fiberglass Duct Rodder for Cable Placing in Pipe, Conduit

Duct rodder, also called fiberglass duct rodder, is composed of three parts: internal copper/steel wire, fiberglass rod, and outer ABS coating. Each duct rodder comes with a sturdy steel frame with different sizes according to the diameter and length of the rod. Some frames are equipped with wheels, also called wheeled duct rodder, which makes it convenient to move at the job site. The fiberglass rod is the basic element of the duct rodder, large proportion of high quality glass fiber (75%) is added, which ensures its stability under shear stress. And polyester resin is embedded together to form a compact bound core.

Portable Duct Rodder for Handy Carry in Cable Pulling

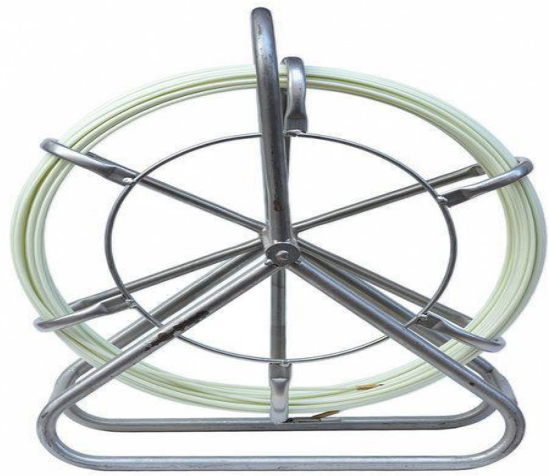

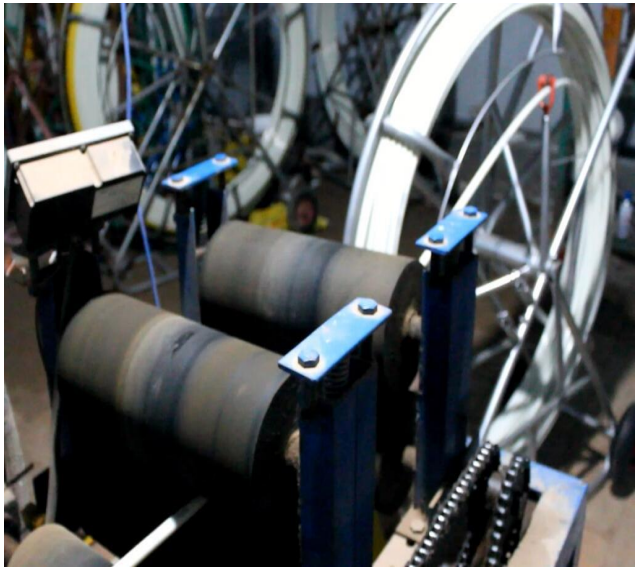

Portable duct rodder shows good performance in wire or cable pulling in pipes, conduits or ducts. Without wheels, it is easy to carry or put in the boot of the car. Generally, when the pulling rod diameter is below 10mm (including 10mm), there is a portable duct rodder needed. And some portable duct rodders are not equipped with a hand operated brake on the frame.

Traceable Fiberglass Duct Rodder Help to Find Out Block and Recondition Broken Cable In Duct or Conduit Without Trenching or Digging.
